

COMANDANTE®

C40 MK4 NITRO BLADE®

The iconic **COMANDANTE® C40** is a robust, high performance grinder with an advanced and pioneering burr set: **NITRO BLADE®**. And the new **MK4** generation just got even better!

Thanks to some smart material science, reworked internals and the addition of a basically unbreakable polymer-glass Bean Jar, the **COMANDANTE® C40 MK4** offers improved workflow, weight, and durability. Made in Germany.

**

The burr material and design is the proud result of years of dedicated research and development at **COMANDANTE®**'s onsite coffee lab. **NITRO BLADE®** is unique, using a high-alloyed, high-nitrogen stainless steel with a fine martensitic micro-crystal matrix.

Burr Geometry has been optimised to achieve excellent **Bean Thruput** with a reduced **Crank Torque** and at the same time deliver a refined **Particle Size Distribution** for best brewing results.

COMANDANTE®'s click system gives you full control for any brewing method and locks your preferred grind setting into place, helping you get the very best out of your roasted coffee and repeat the results again and again. This world class grind performance has made **NITRO BLADE®** the weapon of choice for true coffee enthusiasts around the globe, from home baristas to World Brewers Cup champions.

Every **C40 MK4** comes with one brown glass Bean Jar and one clear polymer-glass Bean Jar. Both are super easy to clean and hold around 40g of roasted coffee beans. Weighing in at just over 600g, the **C40**'s compact size and robust nature means that whether you're at home or off on an adventure, the world's best manual grinder is your loyal companion.

**

Stainless steel is the right choice to build a robust and food safe coffee grinder. That is why not only the burr is made of stainless steel, but also the body, axle, crank and micro ball bearings.

COMANDANTE® products are aluminium free.

Where polymers can be used to improve performance, **COMANDANTE®** uses BPA-free high-performance polymers that meet the strictest food-safety standards. These materials are engineered to endure years of heavy use.

COMANDANTE® loves natural wood. The solid oak handles, produced by friends in Germany's Black Forest, are both wonderfully ergonomic and beautiful to look at thanks to oak's unique grain structure.

For the Classic and Premium Wood models, **COMANDANTE®** craftsmen laminate a thin layer of beautiful wood onto the stainless steel body, before waxing and polishing it with meticulous dedication.

The Classic and Special Coating models use a robust and sleek powder coating – baked on at high temperature, not just painted on. Both body surfaces give you a solid grip for serious crank action.
